Vascular dementia, also known as multi-infarct dementia (MID) and vascular cognitive impairment (VCI), is dementia caused by problems in the supply of blood to the brain, typically a series of minor strokes, leading to worsening cognitive decline that occurs step by step. The term refers to a syndrome consisting of a complex interaction of cerebrovascular disease and risk factors that lead to ...

An elderly male with dementia was admitted for increasing aggression and agitation. He was initially treated with risperidone, citalopram, and memantine, as well as nonpharmacological interventions such as behavioral approaches, environmental modifications, and maintaining sleep routines without improvement.

The goal of person-centred approaches to care is to respect personhood despite cognitive impairment (Skaalvik et al., 2010). Where the personhood of the individual is recognised and valued, the person-with-dementia is awarded standing and status as a respected and valued social being (Kitwood, 1997). A key feature of settings where people-with-dementia have their personhood recognised is that ...

The early detection and classification of dementia are important clinical support tasks for medical practitioners in customizing patient treatment programs to better manage the development and progression of these diseases. Efforts are being made to diagnose these neurodegenerative disorders in the early stages. Indeed, early diagnosis helps patients to obtain the maximum treatment benefit ...

Alzheimer's disease (AD), also referred to simply as Alzheimer's, is a chronic neurodegenerative disease that usually starts slowly and worsens over time. It is the cause of 60-70% of cases of dementia. The most common early symptom is difficulty in remembering recent events (short-term memory loss). As the disease advances, symptoms can include problems with language, disorientation ...
