Prevalence and importance of polymorphism occurring in pharmaceutical compounds are well recognized. It is of great importance to prepare and select the right form from the beginning during drug discovery and development.

### **A practical guide to pharmaceutical polymorph screening**

Polymorphism in crystalline solids is defined as materials with the same chemical composition, different lattice structures and/or different molecular conformations, . Pseudopolymorphism is a term that refers to crystalline forms with solvent molecules as an integral part of the structure, . In a supramolecular sense, polymorphism is the existence of more than one type of network ...

### **General principles of pharmaceutical solid polymorphism: A**

A crystal or crystalline solid is a solid material whose constituents (such as atoms, molecules, or ions) are arranged in a highly ordered microscopic structure, forming a crystal lattice that extends in all directions. In addition, macroscopic single crystals are usually identifiable by their geometrical shape, consisting of flat faces with specific, characteristic orientations.

In this comment we address the preprint of Jha and Hirata (arXiv:1809.10316 [physics.chem-ph]) which claims "Numerical Evidence Falsifying Finite-Temperature Many-Body Perturbation Theory." We agree that finite difference differentiation of the exact grand potential is the correct way to verify the terms in the perturbation expansion.
