Swirl and eddies in engineering. The propensity of a fluid to swirl is used to promote good fuel/air mixing in internal combustion engines.. In fluid mechanics and transport phenomena, an eddy is not a property of the fluid, but a violent swirling motion caused by the position and direction of turbulent flow.

In oceanography, a gyre (/ ˈdʒaɪr /) is any large system of circulating ocean currents, particularly those involved with large wind movements. Gyres are caused by the Coriolis effect; planetary vorticity along with horizontal and vertical friction, determine the circulation patterns from the wind stress curl ( $\nabla \times \tau$ ).. The term gyre can be used to refer to any type of vortex in the air or the ...
