Data Structure is a systematic way to organize data in order to use it efficiently. Following terms are the foundation terms of a data structure. Interface ~ Each data structure has an interface. Interface represents the set of operations that a data structure supports. An interface only provides the list of

## **About the Tutorial**

Data structure design ~ Up to now, designing a program (or a procedure or a function) has meant designing an algorithm. The structure of the data on which the algorithm operates was part of the problem statement. However, when we create a program, we often need to design data structures to store data and intermediate results.
