Electrical breakdown or dielectric breakdown is when current flows through an electrical insulator when the voltage applied across it exceeds the breakdown voltage. This results in the insulator becoming electrically conductive. Electrical breakdown may be a momentary event (as in an electrostatic discharge), or may lead to a continuous arc if protective devices fail to interrupt the current in ...

SZZA047 Semiconductor Packing Material Electrostatic Discharge (ESD) Protection 3 1 Introduction Texas Instruments (TI) ships over 5-billion semiconductor devices on an annual basis.

Semiconductor Packing Material Electrostatic Discharge

Electrostatic discharge (ESD) is a subclass of electrical overstress and may cause immediate device failure, permanent parameter shifts and latent damage causing increased degradation rate.
