A transducer is a device that converts energy from one form to another. Usually a transducer converts a signal in one form of energy to a signal in another.. Transducers are often employed at the boundaries of automation, measurement, and control systems, where electrical signals are converted to and from other physical quantities (energy, force, torque, light, motion, position, etc.).

Ultrasonic transducers or ultrasonic sensors are a type of acoustic sensor divided into three broad categories: transmitters, receivers and transceivers. Transmitters convert electrical signals into ultrasound, receivers convert ultrasound into electrical signals, and transceivers can both transmit and receive ultrasound.. In a similar way to radar and sonar, ultrasonic transducers are used in ...

UniMeasure LX Series transducers are a low-cost compact device for use in light to moderate duty applications in dry environments. The plastic bodied device is ideal for high-volume OEM situations where cost is a major consideration and in applications where small size or low weight are of paramount importance.

Pressure sensors monitor relative system pressure in many process applications as well as hydraulics and pneumatics. Pressure switches provide simple setpoint-tripped signals, while pressure transmitters provide absolute or differential analog readings over wide measuring ranges.
